

TLV350x 4.5-ns, Rail-to-Rail, High-Speed Comparator in Microsize Packages

1 Features

- High Speed: 4.5 ns
- Rail-to-Rail I/O
- Supply Voltage: 2.7 V to 5.5 V
- Push-Pull CMOS Output Stage
- Shutdown (TLV3501 Only)
- Micro Packages: 6-Pin SOT-23 (Single), 8-Pin SOT-23 (Dual)
- Low Supply Current: 3.2 mA

2 Applications

- Automatic Test Equipment
- Wireless Base Stations
- Threshold Detectors
- Zero-Crossing Detectors
- Window Comparators

3 Description

The TLV350x family of push-pull output comparators feature a fast 4.5-ns propagation delay and operation from 2.7 V to 5.5 V. Beyond-the-rails input common-mode range makes it an ideal choice for low-voltage applications. The rail-to-rail output directly drives either CMOS or TTL logic.

Microsize packages provide options for portable and space-restricted applications. The single (TLV3501) is available in 6-pin SOT-23 and 8-pin SO packages. The dual (TLV3502) comes in the 8-pin SOT-23 and 8-pin SO packages.

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TLV3501	SOT-23 (6)	1.60 mm × 2.90 mm
	SOIC (8)	3.91 mm × 4.90 mm
TLV3502	SOT-23 (8)	1.63 mm × 2.90 mm
	SOIC (8)	3.91 mm × 4.90 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT
Voltage	Supply		5.5	V
	Signal input terminal ⁽²⁾	(V-) – 0.3	(V+) + 0.3	V
Current	Signal input terminal ⁽²⁾		10	mA
	Output short circuit ⁽³⁾		74	mA
Temperature	Operating, T _A	–40	125	°C
	Junction, T _J		150	°C
	Storage, T _{stg}	–65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) Input terminals are diode-clamped to the power-supply rails. Input signals that can swing more than 0.3 V beyond the supply rails must be current-limited to 10 mA or less.
- (3) Short-circuit to ground, one comparator per package.

6.2 ESD Ratings

		VALUE	UNIT
V _(ESD) Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±3000	V
	Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	±500	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted).

		MIN	NOM	MAX	UNIT
V _S	Supply voltage	2.2	2.7	5.5	V
V _{IL}	Low-level input voltage, SHDN (comparator is enabled) ⁽¹⁾			(V+) – 1.7	V
V _{IH}	High-level input voltage, SHDN (comparator is disabled) ⁽¹⁾	(V+) – 0.9			V
T _A	Operating temperature	–40		125	°C

- (1) When the SHDN pin is within 0.9 V of the most positive supply, the part is disabled. When it is more than 1.7 V below the most positive supply, the part is enabled.

6.4 Thermal Information: TLV3501

THERMAL METRIC ⁽¹⁾		TLV3501		UNIT
		DBV (SOT-23)	D (SOIC)	
		6 PINS	8 PINS	
R _{θJA}	Junction-to-ambient thermal resistance	192.2	129.5	°C/W
R _{θJC(top)}	Junction-to-case (top) thermal resistance	134.8	75.9	°C/W
R _{θJB}	Junction-to-board thermal resistance	37.1	69.8	°C/W
Ψ _{JT}	Junction-to-top characterization parameter	28.3	29.7	°C/W
Ψ _{JB}	Junction-to-board characterization parameter	36.7	69.3	°C/W
R _{θJC(bot)}	Junction-to-case (bottom) thermal resistance	—	—	°C/W

- (1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](#).

6.5 Thermal Information: TLV3502

THERMAL METRIC ⁽¹⁾		TLV3502		UNIT
		D (SOIC)	DCN (SOT-23)	
		8 PINS	8 PINS	
R _{θJA}	Junction-to-ambient thermal resistance	116.4	191.6	°C/W
R _{θJC(top)}	Junction-to-case (top) thermal resistance	61.7	43.9	°C/W
R _{θJB}	Junction-to-board thermal resistance	57	120.3	°C/W
ψ _{JT}	Junction-to-top characterization parameter	18.5	14.4	°C/W
ψ _{JB}	Junction-to-board characterization parameter	56.5	118.6	°C/W
R _{θJC(bot)}	Junction-to-case (bottom) thermal resistance	—	—	°C/W

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](#).

6.6 Electrical Characteristics

At T_A = 25°C and V_S = 2.7 V to 5.5 V, unless otherwise noted.

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
OFFSET VOLTAGE						
V _{OS}	Input offset voltage ⁽¹⁾	V _{CM} = 0 V, I _O = 0 mA		±1	±6.5	mV
dV _{OS} /dT	Input offset voltage vs temperature	T _A = −40°C to +125°C		±5		μV/°C
PSRR	Input offset voltage vs power supply	V _S = 2.7 V to 5.5 V		100	400	μV/V
	Input hysteresis			6		mV
INPUT BIAS CURRENT						
I _B	Input bias current ⁽²⁾	V _{CM} = V _{CC} /2		±2	±10	pA
I _{OS}	Input offset current ⁽²⁾⁽³⁾	V _{CM} = V _{CC} /2		±2	±10	pA
INPUT VOLTAGE RANGE						
V _{CM}	Common-mode voltage range		(V−) − 0.2		(V+) − 0.2	V
CMRR	Common-mode rejection ratio	V _{CM} = −0.2 V to (V+) + 0.2 V	57	70		dB
		V _{CM} = −0.2 V to (V+) + 0.2 V, T _A = −40°C to +125°C	55			
INPUT IMPEDANCE						
	Common-mode			10 ¹³ 2		Ω pF
	Differential			10 ¹³ 4		Ω pF
OUTPUT						
V _{OH} , V _{OL}	Voltage output swing from rail	I _{OUT} = ±1 mA		30	50	mV
SHUTDOWN						
t _{OFF}	Shutdown turnoff time			30		ns
t _{ON}	Shutdown turnon time			100		ns
V _L	SHDN low threshold	Comparator is enabled ⁽⁴⁾			(V+) − 1.7	V
V _H	SHDN high threshold	Comparator is disabled ⁽⁴⁾	(V+) − 0.9			V
	Input bias current of shutdown pin			2		pA
I _{QSD}	Quiescent current in shutdown			2		μA
POWER SUPPLY						
V _S	Specified voltage		2.7		5.5	V
	Operating voltage range	Higher end		2.2		V
		Lower end		5.5		
I _O	Quiescent current	V _S = 5 V, V _O = High		3.2	5	mA

(1) V_{OS} is defined as the average of the positive and the negative switching thresholds.

(2) Not production tested.

(3) The difference between I_{B+} and I_{B-}.

(4) When the shutdown pin is within 0.9 V of the most positive supply, the part is disabled. When it is more than 1.7 V below the most positive supply, the part is enabled.

Electrical Characteristics (continued)

At $T_A = 25^\circ\text{C}$ and $V_S = 2.7\text{ V}$ to 5.5 V , unless otherwise noted.

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
TEMPERATURE RANGE					
Specified range		–40		125	$^\circ\text{C}$
Operating range		–40		125	$^\circ\text{C}$

6.7 Switching Characteristics

At $T_A = 25^\circ\text{C}$ and $V_S = 2.7\text{ V}$ to 5.5 V , unless otherwise noted.

PARAMETER	TEST CONDITIONS		MIN	TYP	MAX	UNIT
$T_{(pd)}$ Propagation delay time ⁽¹⁾⁽²⁾	$\Delta V_{IN} = 100\text{ mV}$, Overdrive = 20 mV	At $T_A = 25^\circ\text{C}$		4.5	6.4	ns
		At $T_A = -40^\circ\text{C}$ to $+125^\circ\text{C}$			7	ns
	$\Delta V_{IN} = 100\text{ mV}$, Overdrive = 5 mV	At $T_A = 25^\circ\text{C}$		7.5	10	ns
		At $T_A = -40^\circ\text{C}$ to $+125^\circ\text{C}$			12	ns
$\Delta t_{(SKEW)}$ Propagation delay skew ⁽³⁾	$\Delta V_{IN} = 100\text{ mV}$, overdrive = 20 mV			0.5		ns
f_{MAX} Maximum toggle frequency	Overdrive = 50 mV, $V_S = 5\text{ V}$			80		MHz
t_R Rise time ⁽⁴⁾				1.5		ns
t_F Fall time ⁽⁴⁾				1.5		ns

(1) Not production tested.

(2) Propagation delay cannot be accurately measured with low overdrive on automatic test equipment. This parameter is ensured by characterization and testing at 100-mV overdrive.

(3) The difference between the propagation delay going high and the propagation delay going low.

(4) Measured between 10% of V_S and 90% of V_S .

6.8 Typical Characteristics

At $T_A = 25^\circ\text{C}$, $V_S = 5\text{ V}$, and input overdrive = 100 mV, unless otherwise noted.

7 Detailed Description

7.1 Overview

The TLV3501 and TLV3502 devices both feature high-speed response and include 6 mV of internal hysteresis for improved noise immunity with an input common-mode range that extends 0.2 V beyond the power-supply rails.

7.2 Functional Block Diagram

Copyright © 2016, Texas Instruments Incorporated

7.3 Feature Description

7.3.1 Operating Voltage

The TLV350x comparators are specified for use on a single supply from 2.7 V to 5.5 V (or a dual supply from ± 1.35 V to ± 2.75 V) over a temperature range of -40°C to $+125^{\circ}\text{C}$. These devices continue to function below this range, but performance is not specified.

7.3.2 Input Overvoltage Protection

Device inputs are protected by electrostatic discharge (ESD) diodes that conduct if the input voltages exceed the power supplies by more than approximately 300 mV. Momentary voltages greater than 300 mV beyond the power supply can be tolerated if the input current is limited to 10 mA. This limiting is easily accomplished with a small input resistor in series with the comparator, as shown in [Figure 15](#).

Figure 15. Input Current Protection for Voltages Exceeding the Supply Voltage

7.4 Device Functional Modes

7.4.1 Shutdown

A shutdown pin allows the device to go into idle when it is not in use. When the shutdown pin is high, the device draws approximately 2 μ A, and the output goes to high impedance. When the shutdown pin is low, the TLV3501 is active. When the TLV3501 shutdown feature is not used, connect the shutdown pin to the most negative supply, as shown in Figure 16. Exiting shutdown mode requires approximately 100 ns. The TLV3502 does not have the shutdown feature.

Figure 16. Basic Connections for the TLV3501

8 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

8.1.1 Adding External Hysteresis

The TLV350x has a robust performance when used with a good layout. However, comparator inputs have little noise immunity within the range of a specified offset voltage (± 5 mV). For slow-moving or noisy input signals, the comparator output can cause an undesirable switch state as input signals move through the switching threshold. In such applications, the 6 mV of internal hysteresis of the TLV350x might not be sufficient. For greater noise immunity, external hysteresis can be added by connecting a small amount of feedback to the positive input. [Figure 17](#) shows a typical topology used to introduce 25 mV of additional hysteresis, for a total of 31-mV hysteresis when operating from a single 5-V supply. Use [Equation 1](#) to calculate the approximate total hysteresis.

$$V_{\text{HYST}} = \frac{(V_+) \times R_1}{R_1 + R_2} + 6\text{mV} \quad (1)$$

The total hysteresis, V_{HYST} , sets the value of the transition voltage required to switch the comparator output, by enlarging the threshold region, thereby reducing sensitivity to noise.

Figure 17. Adding Hysteresis to the TLV350x

8.2 Typical Application

8.2.1 Relaxation Oscillator

The TLV350x can easily be configured as a simple and inexpensive relaxation oscillator. In [Figure 18](#), the R_2 network sets the trip threshold at $1/3$ and $2/3$ of the supply. Because this circuit is a high-speed circuit, the resistor values are low to minimize the effects of parasitic capacitance. The positive input alternates between $1/3$ of V_+ and $2/3$ of V_+ , depending on whether the output is low or high. The time to charge (or discharge) is $0.69 \times R_1 C$. Therefore, the period is $1.38 \times R_1 C$. For 62 pF and 1 kΩ as shown in [Figure 18](#), the output is calculated to 10.9 MHz. An implementation of this circuit oscillated at 9.6 MHz. Parasitic capacitance and component tolerances explain the difference between theory and actual performance.

Typical Application (continued)

Figure 18. Relaxation Oscillator

8.2.1.1 Design Requirements

For hysteresis of $1/3$ of V_+ and threshold levels between $1/3$ of V_+ and $2/3$ of V_+ , the resistors connected to the comparator positive input must be equal in value. The resistor value must be kept low enough so it does not create additional time constant because of the input capacitor and board parasitic capacitor. The value of the charging resistor, R_1 , must be relatively low for high-frequency switching without drawing high current and affecting the output high and low level. The value of the charging capacitor must be high enough to avoid errors cause by parasitic capacitance.

8.2.1.2 Detailed Design Procedure

For the positive input, $+IN = 1/3 V_{OUT} + 1/3 V_+ = 1/3 V_+$ if V_{OUT} is low and assuming V_{OL} is very close to GND. Or, $+IN = 1/3 V_{OUT} + 1/3 V_+ = 1/3 V_+ + 1/3 V_+ = 2/3 V_+$ if V_{OUT} is high and assuming V_{OH} is very close to V_+ .

For the negative input, the capacitor charges to $2/3 V_+$ and discharges to $1/3 V_+$ exponentially at the same rate with a time constant of $R_1 C$.

8.2.1.3 Application Curve

Figure 19. TLV3501 Device With Upper and Lower Thresholds With 1-V Hysteresis

Typical Application (continued)

8.2.2 High-Speed Window Comparator

A window comparator circuit determines when a signal is between two voltages. The TLV3502 can readily be used to create a high-speed window comparator. V_{HI} is the upper voltage threshold, and V_{LO} is the lower voltage threshold. When V_{IN} is between these two thresholds, the output in Figure 20 is high. Figure 21 shows a simple means of obtaining an active low output. The reference levels are connected differently between Figure 20 and Figure 21. The operating voltage range of either circuit is 2.7 V to 5.5 V.

Figure 20. Window Comparator—Active High

Figure 21. Window Comparator—Active Low

9 Power Supply Recommendations

The TLV350x comparators are specified for use on a single supply from 2.7 V to 5.5 V (or a dual supply from ± 1.35 V to ± 2.75 V) over a temperature range of -40°C to $+125^{\circ}\text{C}$. These devices continue to function below this range, but performance is not specified.

Place bypass capacitors close to the power-supply pins to reduce noise coupling in from noisy or high-impedance power supplies. For more detailed information on bypass capacitor placement, see [Layout Guidelines](#).

10 Layout

10.1 Layout Guidelines

For any high-speed comparator or amplifier, proper design and printed-circuit board (PCB) layout are necessary for optimal performance. Excess stray capacitance on the active input, or improper grounding, can limit the maximum performance of high-speed circuitry.

Minimizing resistance from the signal source to the comparator input is necessary to minimize the propagation delay of the complete circuit. The source resistance, along with input and stray capacitance, creates an RC filter that delays voltage transitions at the input, and reduces the amplitude of high-frequency signals. The input capacitance of the TLV350x, along with stray capacitance from an input pin to ground, results in several picofarads of capacitance.

The location and type of capacitors used for power-supply bypassing are critical to high-speed comparators. The suggested 2.2- μF tantalum capacitor does not need to be as close to the device as the 0.1- μF capacitor, and may be shared with other devices. The 2.2- μF capacitor buffers the power-supply line against ripple, and the 0.1- μF capacitor provides a charge for the comparator during high-frequency switching.

In a high-speed circuit, fast rising and falling switching transients create voltage differences across lines that would be at the same potential at DC. To reduce this effect, use a ground plane to reduce difference in voltage potential within the circuit board. A ground plane has the advantage of minimizing the effect of stray capacitances on the circuit board by providing a more desirable path for the current to flow. With a signal trace over a ground plane, at high-frequency the return current (in the ground plane) tends to flow right under the signal trace. Breaks in the ground plane (as simple as through-hole leads and vias) increase the inductance of the plane, making it less effective at higher frequencies. Breaks in the ground plane for necessary vias must be spaced randomly.

10.2 Layout Examples

Figure 22 shows an evaluation layout for the TLV3501 8-pin SOIC package; Figure 23 is for the 5-pin SOT-23 package. Both evaluation layouts are shown with SMA connectors that bring signals on and off the board. RT1 and RT2 are termination resistors for $+V_{IN}$ and $-V_{IN}$, respectively. C1 and C2 are power-supply bypass capacitors. Place the 0.1- μ F capacitor closest to the comparator. The ground plane is not shown, but the pads connecting the resistors and capacitors are shown. Figure 24 shows a schematic of this circuit.

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

⁽⁴⁾ There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

⁽⁵⁾ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

⁽⁶⁾ Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

DBV (R-PDSO-G6)

PLASTIC SMALL-OUTLINE PACKAGE

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Body dimensions do not include mold flash or protrusion. Mold flash and protrusion shall not exceed 0.15 per side.
 - D. Leads 1,2,3 may be wider than leads 4,5,6 for package orientation.
 - E. Falls within JEDEC MO-178 Variation AB, except minimum lead width.

DBV (R-PDSO-G6)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
 - D. Publication IPC-7351 is recommended for alternate designs.
 - E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC-7525 for other stencil recommendations.

DCN (R-PDSO-G8)

PLASTIC SMALL-OUTLINE PACKAGE (DIE DOWN)

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Package outline exclusive of metal burr & dambar protrusion/intrusion.
 - D. Package outline inclusive of solder plating.
 - E. A visual index feature must be located within the Pin 1 index area.
 - F. Falls within JEDEC MO-178 Variation BA.
 - G. Body dimensions do not include flash or protrusion. Mold flash and protrusion shall not exceed 0.25 per side.

DCN (R-PDSO-G8)

PLASTIC SMALL-OUTLINE PACKAGE (DIE DOWN)

- NOTES:
- All linear dimensions are in millimeters.
 - This drawing is subject to change without notice.
 - Publication IPC-7351 is recommended for alternate designs.
 - Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525.
 - Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

D (R-PDSO-G8)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in inches (millimeters).
 - B. This drawing is subject to change without notice.
 - $\triangle C$ Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.006 (0,15) each side.
 - $\triangle D$ Body width does not include interlead flash. Interlead flash shall not exceed 0.017 (0,43) each side.
 - E. Reference JEDEC MS-012 variation AA.

D (R-PDSO-G8)

PLASTIC SMALL OUTLINE

4211283-2/E 08/12

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Publication IPC-7351 is recommended for alternate designs.
 - D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
 - E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
